"The thrombospondin motif of aggrecanase-1 (ADAMTS-4) is critical for aggrecan substrate recognition and cleavage.";
J. Biol. Chem. 275:25791-25797 (2000).
I. Biol. Chem. 275:25791-25797 (2000).
I. FUNCTION: CLEAVES AGGRECAN, A CARTILAGE PROTECCLYCAN, AND MAY BE INVOLVED IN ITS TURNOVER. MAY PLAY AN IMPORTANT ROLE IN THE DESTRUCTION OF AGGRECAN IN ARTHRITIC DISBASES. COULD ALSO BE A ONE ALZHEIMER'S DISBASE.
CRITICAL FACTOR IN THE EXACERBATION OF NEURODEGENERATION IN ALZHEIMER'S DISBASE.
-!- CATALYTIC ACTIVITY: Cleaves aggrecan at the 392-Glu-|-Ala-393
                                                                                                                                                                   -1-SUBCELLULAR LOCATION: Secreted. Associated with the extracellular matrix (By similarity).
-1-SUBCELLULAR LOCATION: Secreted. Associated with the extracellular matrix (By similarity).
-1-TISSUE SPECIFICITY: EXPRESSED IN BRAIN, LUNG AND HEART. EXPRESSED AT VERY LOW LEVEL IN PLACENTA AND SKELETAL MUSCLES.
-1-INDUCTION: BY INTERLEUKTY.
-1-DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT FOR A TIGHT INTERACTION WITH THE EXTRACELLULAR MATRIX.
-1-STMILARITY: BELONGS TO PEPTIDASE FAMILY MI2B.
-1-SIMILARITY: CONTAINS 1 DISINTEGRIN-LIKE DOMAIN.
-1-SIMILARITY: CONTAINS 1 DISINTEGRIN-LIKE DOMAIN.
-1-CAUTION: HAS SOMETIMES BEEN REFERRED TO AS ADAMTS2.

").

i. a.tol. Chem. 270:16724-16730(1995).

i. FUNCTION: CLEAVES THE PROPEPTIDES OF TYPE I AND II COLLAGEN PRIOR TO FIBRIL ASSEMBLY. DOES NOT ACT ON TYPE III COLLAGEN. MAY ALSO PLAY A ROLE IN DEVELOPMENT THAT IS INDEPENDANT OF ITS ROLE IN COLLAGEN BIOSYNTHESIS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=97225960; PubMed=9122202;

                                                                                                                                                                                                                                                                                                              -1- DISEASE: DEFECTS IN ADAMTS2 ARE THE CAUSE OF DERMATOSPARAXIS, A RECESSIVELY INHERITED DISORDER CHARACTERIZED BY SEVERE SKIN FRAGELLITY AND BIOCHEMICALLY BY THE PRESENCE IN SKIN OF PROCLEAGEN INCOMPLETELY PROCEESSED AT THE AMINO TERMINUS.
-1- SIMILARITY: BELONGS TO PEPTIDASE FAMILY MI2B.
-1- SIMILARITY: CONTAINS 1 DISINITINGRININ-LIKE DOMAIN.
-1- SIMILARITY: CONTAINS 4 TSP TYPE-1 DOMAINS.
-1- CAUTION: HAS SOMETIMES BEEN REFERRED TO ADAMTS3.
COFACTOR: BINDS 1 ZINC ION (BY SIMILARITY).
SUBUNIT: MAY BELONG TO A MULTIMERIC COMPLEX. BINDS SPECIFICALLY TO
COLLAGEN TYPE XIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (POTENTIAL).

-1- COPACTOR: BINDS 1 ZINC ION (BY SIMILARITY).
-1- SUBUNIT: MAY BELONG TO A MULTIMERIC COMPLEX. BINDS SPECIFICALLY TO COLLAGEN TYPE XIV (BY SIMILARITY).
-1- SUBCELLULAR LOCATION: Secreted. Associated with the extracellular matrix (By similarity).
-1- ALTERNATIVE PRODUCTS: 2 ISOFORMS; LPNPI (SHOWN HERE) AND SPNPI;
-1- ALTERNATIVE PRODUCTS: 2 ISOFORMS; LPNPI (SHOWN HERE) AND SIGNIFICANT N- PROCOLLAGEN PEPTIDASE ACTIVITY.
-1- TISSUE SPECIFICITY: EXPRESSED AT HIGH LEVEL IN SKIN, BONE, TENDON AND ARAIN.
-1- DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT FOR A TIGHT INTERACTION WITH THE EXTRACELLULAR MATRIX.
-1- PIM: THE PRECURSOR IS CLEAVED BY A FURIN ENDOPEPTIDASE (BY

"Human Ehlers-Danlos syndrome type VII C and bovine dermatosparaxis

are caused by mutations in the procollagen I N-proteinase gene.";

Am. J. Hum. Genet. 65:308-317(1999).

I. FUNCTION: Cleaves the propeptides of type I and II collagen prior

to fibril assembly. Does not act on type III collagen. May also

play a role in development that is independant of it, role in

collagen biosynthesis.

-:- CATALYTIC ACTIVITY: Cleaves the N-propeptide of collagen chain

alpha-1(I) at Pro-|-Gln and of alpha-1(II) and alpha-2(I) chains

SUBCELLULAR LOCATION: Secreted. Associated with the extracellular matrix (BY similarity).

DEVELOPMENTAL STAGE: EXPRESSED SPECIFICALLY IN THE PERI-IMPLANTATION PERIOD IN EMBRYO AND TROPHOBLAST AND AT LOW OR UNDECTABLE LEVEL THEREAPTER.

DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT POR A TIGHT INTERACTION WITH THE EXTRACELLULAR MATRIX.

PTM: THE PRECURSOR IS CLEAVED BY A FURIN ENDOPEPTIDASE (BY
zinc metalloproteases.";

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (SEP-1993) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: THE MITOCHONDRIAL PROCESSING PROTEASE CLEAVES
PRESEQUENCES FROM MITOCHONDRIAL PROTEIN PRECURSORS.

-!- CATALYTIC ACTIVITY: Release of N-terminal transit peptides from precursor procesins imported into the mitochondrion, typically wider in position P2.

-!- COFACTOR: REQUIRES DIVALENT CATIONS FOR ACTIVITY.

-!- SUBUNIT: HETERODIMER OF ALPHA AND BETA SUBUNITS.

-!- SUBCELLUMAR LOCATION: MILOCHONDRIAL MATTIX.

--- PUNCTION: COULD BE REQUIRED FOR THE FORMATION OF A FUNCTIONAL NITROGRNASE FE PROTEIN. PROBABLY ACCEPTS ELECTRONS FROM FIXA/FIXB AND REDUCES A QUINONE.
--- COFACTOR: FAD (POTENTIAL).
--- SIMILARITY: BELONGS TO THE ETF-QO / FIXC FAMILY.

Genet. 104:460-466(1999).

-!- FUNCTION: THIS IS A COMPONENT OF THE UBIQUINOL-CYTOCHROME C REDUCTASE COMPLEX III OR CYTOCHROME B-I COMPLEX), WHICH IS PART OF THE MITOCHOMBIAL RESPIRATORY CHAIN. THIS PROTEIN MAY MEDIATE FORMATION OF THE COMPLEX BETWEEN CYTOCHROMES C AND CI.

-!- CATALYTIC ACTIVITY: OH(2) + 2 ferricytochrome c = 0 + 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         InterPro; IPR001431; Peptidase M16.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Seguence 6,
